

Sole Source Procurement for Hadronex dba SmartCover

January 17, 2023

SmartCover

- Sensors attached to City Sewer Manholes to detect potential Sanitary System Overflows (SSO).
- 31 SmartCovers in the City's sewer system located at potential overflow sites have prevented at least 20 SSOs.
- Sole Source is for service of existing SmartCovers.
- Proprietary software is only compatible with SmartCover components.
- First selected in 2016, only supplier at the time.

Why Sole Source Needed

- While new technologies are being developed, they need to be tested for compatibility and reliability.
- Without SmartCovers, the City will lose the ability to proactively respond to SSOs before they happen.
- SSO's impact the health and safety of local residents and businesses. Can result in significant fines from the Regional Water Quality Control Board ranging from \$50,000 to \$250,000 and can also cause closure of the beach.
