AirPave

By AirField Systems,

A flexible porous paving and drainage system for grass pave fire lanes, reinforced turf paving and swales. With over 400 installations across the country AirPave for grass pave is 233 psi unfilled, **6,747 psi sand filled** and is made of 100% recycled content which can contribute to LEED™ points.

AirPave always ships with enough for 2 layers of the **guaranteed analysis** fertilizer needed. One for the sub base to be worked in before compaction and watered. And the other to be added on top of the sand filled grid and watered in before the turf grass is installed. We believe if done properly it will set up the project for the best possible result.

AirPave can save the owner up to **\$0.80 per square foot or more** over our nearest competitors.

Benefits of an AirPave grass paving system include:

- A 40% or more material cost savings over most competitors
- Up to 45% cost savings on shipping, compared with rolled grass paving systems
- **2 Layers of Sustane Fertilizer with a guaranteed analysis**
- AirPave has been installed in over 400 flexible porous paving projects
- AirPave is made with 100% recycled copolymer polypropylene plastic with an impact modifier added to achieve a (NO-BREAK) plastics classification and a minimum 3% carbon black added for UV protection.
- Loading capability is equal to 233 psi empty and **6,747 psi when filled with clean sharp sand, over an appropriate base depth that provides adequate support for project design loads exceeding H-20 & H-25 requirements.**
- AirPave is shipped on pallets with 114 parts equal to 798 sq. ft. per pallet. Each part is 32"x32"x1", weighs 3.10 lbs and is 8% solid.
