RESOLUTION NO. 2022-63

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF HUNTINGTON BEACH CERTIFYING FINAL SUBSEQUENT ENVIRONMENTAL IMPACT REPORT NO. 22-002 FOR THE CITY OF HUNTINGTON BEACH 6TH CYCLE HOUSING ELEMENT UPDATE (2021-2029), ADOPTING FINDINGS PURSUANT TO THE CALIFORNIA ENVIRONMENTAL QUALITY ACT, ADOPTING A STATEMENT OF OVERRIDING CONSIDERATIONS, AND ADOPTING A MITIGATION MONITORING AND REPORTING PROGRAM

WHEREAS, the City of Huntington Beach ("City") initiated an update to the 6th Cycle Housing Element Update (2021-2029); and

The City, as Lead Agency has prepared a Final Subsequent Environmental Impact Report ("Final SEIR") for the 6th Cycle Housing Element Update (2021-2029); and

The Final SEIR is a program EIR, as defined by State and local guidelines for the implementation of the California Environmental Quality Act ("CEQA"); and

The Final SEIR has been prepared to address the environmental effects, mitigation measures, and project alternatives associated with the 6th Cycle Housing Element Update (2021-2029) including the implementation programs to accommodating housing sites through rezoning and housing overlay zones, in accordance with CEQA, the State CEQA Guidelines and City environmental procedures; and

Written comments on the scope of the Draft SEIR were received from the public and responsible public agencies during the 30-day review period on the Notice of Preparation from August 5, 2021 to September 7, 2021.

A Draft SEIR was prepared for the Project between September 2021 and June 2022. In accordance with the CEQA and the Guidelines, promulgated with respect thereto, the City analyzed the Project's potential impacts on the environment.

Written comments on the Draft SEIR were received from the public and responsible public agencies during a 47-day public comment period, from June 29, 2022 through August 15, 2022; and

Such comments and testimony were responded to through Response to Comments document included in the Final SEIR and said Final SEIR was made available in a manner prescribed by CEQA and the CEQA Guidelines; and

Public Resources Code 21092.5(a) requires that the City provide a written response to any public agency that comment on the EIR, and the Response to Comments included in the Final SEIR satisfies this requirement; and

On October 11, 2022, the Planning Commission recommended that the City Council certify Final SEIR No. 22-002; and

The City Council has independently reviewed all environmental documentation comprising the EIR, including all elements of the Final SEIR, and has found that the EIR considers all environmental effects of the 6th Cycle Housing Element Update (2021-2029), is complete and adequate, and fully complies with all the requirements of CEQA and the CEQA Guidelines; and

Section 15092 of the CEQA Guidelines provides that the City shall not decide to approve or carry out a project for which an EIR was prepared unless it has:

- (A) Eliminated or substantially lessened all significant effects on the environment where feasible as shown in the findings under Section 15091 of the CEQA Guidelines; and
- (B) Determined that any remaining significant effects found to be unavoidable under Section 15091are acceptable due to overriding concerns as described in Section 15093 of the CEQA Guidelines and as set forth in the attached Statement of Overriding Considerations (Exhibit A); and

Section 15093(a) if the CEQA Guidelines requires that the City balance the benefits of a proposed project against its unavoidable environmental risks in determining whether to approve the project, and the City Council has carefully considered said benefits and risks,

NOW, THEREFORE, the City Council of the City of Huntington Beach does hereby resolve as follows:

1. That the City Council hereby certifies the Final SEIR as complete and adequate in that it addresses all environmental effects of the 6th Cycle Housing Element Update (2021-2029), and fully complies with the requirements of CEQA and the CEQA Guidelines. The Final SEIR is composed of the following elements:

- a. Draft SEIR and Technical Appendices; and
- b. Planning Commission and City Council staff reports; and
- c. Planning Commission and City Council Minutes; and
- d. Comments received on the Draft SEIR and responses to those comments; and
 - 2

- e. Mitigation Monitoring and Reporting Program; and
- f. Errata to the Draft SEIR

All of the above information has been and will be on file with the City of Huntington Beach Community Development Department, 2000 Main Street, Huntington Beach, California, 92648 and with the City Clerk.

2. That the City Council finds that the Final SEIR has identified all significant environmental effects of the project and that there are no known potential environmental impacts not addressed in the Final SEIR.

3. That the City Council finds that the Final SEIR has described all reasonable alternatives to the project that could feasibly attain the basic project objectives (including the "No Project" alternative), even when these alternatives might impede attainment of project objectives and might be more costly. Further, the City Council finds that a good faith effort was made to incorporate alternatives in the preparation of the Draft SEIR and all reasonable alternatives were considered in the review process of the Final SEIR and ultimate decisions on the project.

4. The City Council further finds that the benefits gained by the City and its current and future residents by virtue of implementing the goals and policies of the Housing Element Update and overriding environmental impacts that remain significant and unavoidable despite the imposition of all feasible mitigation, as detailed in Final SEIR No. 22-002 and the Statement of Overriding Considerations attached hereto as Exhibit A, and incorporated by reference as though fully set forth herein.

5. That the City Council of the City of Huntington Beach does hereby certify Final SEIR No. 22-002.

3

PASSED AND ADOPTED by the City Council of the City of Huntington Beach at an

adjourned regular meeting held on _____ day of _____, 2022.

1.0 INTRODUCTION

This document presents the Findings of Fact and Statement of Overriding Considerations that must be adopted by the City of Huntington Beach (City) pursuant to the requirements of Sections 15091 and 15093, respectively, of the CEQA Guidelines prior to the approval of the City of of Huntington Beach 2021-2029 Housing Element Update (otherwise referred to as "HEU" or the "Project").

This document is organized as follows:

- **Chapter 1** Introduction to the Findings of Fact and Statement of Overriding Considerations.
- **Chapter 2** CEQA Findings of the Draft Subsequent Environmental Impact Report (Draft SEIR), including the identified significant cumulative impacts.
- Chapter 3 Summarizes the alternatives to the Project and evaluates them in relation to the findings contained in Section 15091(a)(3) of the CEQA Guidelines. The City must consider and make findings regarding alternatives when a project would involve environmental impacts that cannot be reduced to a less than significant level, or cannot be substantially reduced, by proposed mitigation measures.
- Chapter 4 Statement of Overriding Considerations, as required by Section 15093 of the CEQA Guidelines, for significant impacts of a proposed project that cannot be mitigated to a less than significant level.

The Housing Element, which is a component of the Huntington Beach General Plan, provides direction for implementation of various programs to meet existing and projected future housing needs for all income levels within Huntington Beach. The City's projected housing need for the 6th Cycle Regional Housing Needs Assessment (RHNA) planning period (2021-2029) is 13,368 dwelling units (11,743 units when accounting for existing applications and projects that are currently under review).

State housing law requires the City to specify the number of housing units that can realistically be accommodated on candidate housing sites. The City is not required to build dwelling units in order to meet its RHNA allocation, only to identify potential sites and create the framework to allow the market the opportunity to develop these units. Therefore, the Project, as defined for CEQA purposes, consists of the Housing Program to accommodate the lower-income RHNA units, including amendments to existing land use designations and zoning districts, an affordable housing overlay, and identification of underutilized, residentially-zoned parcels in an inventory of 378 candidate housing sites.

The Housing Program specifically addressed in the SEIR includes amendments to the Huntington Beach Zoning and Subdivision Ordinance (HBZSO) (Zoning Map Amendment Nos. 22-001 and 22-002 and Zoning Text Amendment Nos. 22-006, 22-007, 22-008, and 22-009) and the Huntington Beach General Plan Land Use Element (General Plan Amendment No. 22-001) for changes to base/overlay districts and land use

designations, as well amendments to other planning documents, as needed for clarification and consistency purposes and to accommodate future housing sites as part of the HEU's Implementation Program. These amendments provide capacity for future development of approximately 19,738 housing units to meet the City's remaining unmet RHNA of 11,743 housing units.

Other Federal, State, and local agencies are involved in the review and approval of the HEU, including those agencies designated as trustee and responsible agencies. A trustee agency is a State agency that has jurisdiction by law over natural resources affected by a project that are held in trust for the people of the State. A responsible agency is an agency, other than the lead agency, that has responsibility for carrying out or approving a project. Responsible and trustee agencies are consulted by the CEQA lead agency to ensure the opportunity for input and also review and comment on the Draft SEIR. Responsible agencies also use the CEQA document in their decision-making. Several agencies other than the City may require permits, approvals, and/or consultation to implement various HEU programs.

Responsible/Trustee Agencies for the HEU include, but are not limited to:

- South Coast Air Quality Management District (SCAQMD);
- Santa Ana Regional Water Quality Control Board (RWQCB); and
- State Department of Housing and Community Development (HCD).

Other agencies may use the Final SEIR in exercising their duties even if they do not have discretionary permit approval authority over all or parts of the HEU (or implementation of individual projects developed as a result of the HEU). All projects that are proposed in the future under the HEU will be required to obtain all necessary discretionary actions and environmental clearance, separate from this HEU.

2.0 CEQA FINDINGS

This chapter summarizes the potential impacts that were identified in the Draft Subsequent EIR (Draft SEIR) and the findings that are required in accordance with Section 15091 of the CEQA Guidelines. The possible findings for each significant and/or potentially significant adverse impact are as follows:

- (a) Changes or alterations have been required in, or incorporated into the project which avoid, substantially lessen, or reduce the magnitude of the significant environmental effect as identified in the Draft SEIR ("Finding 1").
- (b) Such changes or alterations are within the responsibility and jurisdiction of another public agency and not the agency making the findings. Such changes have been adopted by such other agency or can and should be adopted by such other agency. ("Finding 2")
- (c) Specific economic, social, or other considerations make infeasible the mitigation measures or project alternatives in the Draft SEIR ("Finding 3").

CEQA requires that the lead agency adopt mitigation measures or project alternatives, where feasible, to avoid or substantially reduce significant environmental impacts that would otherwise occur as a result of a project. Project modifications or alternatives are not required where they are infeasible or where the responsibility for modifying a project lies with another agency (CEQA Guidelines §15091, subd. (a), [3]). Public Resources Code Section 21061.1 defines "feasible" to mean "capable of being accomplished in a successful manner within a reasonable period of time, taking into account economic, environmental, social and technological factors." CEQA Guidelines Section 15364 adds: "legal" considerations. (See also Citizens of Goleta Valley v. Board of Supervisors [Goleta II] [1990] 52 Cal.3d 553, 565 [276 Cal. Rptr. 410].)

Only after fully complying with the findings requirement can an agency adopt a Statement of Overriding Considerations. (Citizens for Quality Growth v. City of Mount Shasta [1988] 198 Cal.App.3d 433, 442, 445 [243 Cal. Rptr. 727].) CEQA requires the Lead Agency to state in writing the specific rationale to support its actions based on a Final EIR and/or information in the record. This written statement is known as the Statement of Overriding Considerations. The Statement of Overriding Considerations provides the information that demonstrates the decision making body of the Lead Agency has weighed the benefits of a project against its unavoidable adverse effects in determining whether to approve a project. If the benefits of a project outweigh the unavoidable adverse environmental effects, the adverse effects may be considered "acceptable."

This document presents the findings of the City as required by CEQA, cites substantial evidence in the record in support of each of the findings, and presents an explanation to supply the logical step between the finding and the facts in the record. (CEQA Guidelines §15091.). Additional facts that support the findings are set forth in the Draft SEIR, the Final SEIR, staff reports to the Planning Commission and City Council, and the record of proceedings.

Table 1 summarizes the potentially significant impacts that were reduced to less than significant levels with mitigation as well as the significant impacts, as proposed for certification and adoption of the HEU.

| Impact Statement | Impact Summary | Impact Finding | |
|--|---|---|--|
| Air Quality | | | |
| The project would result in a project- specific significant and unavoidable air quality impacts associated with a cumulatively considerable net increase of criteria pollutants for which the region is in nonattainment. | Air pollutant emissions associated with implementation of the HEU would result from construction activities and operation of uses allowed under the HEU. The amount of emissions generated by future development projects would vary depending on its size, the land area that would need to be disturbed during construction, the length of the construction schedule, and the number of developments being constructed concurrently. Due to the speculative nature of estimating emissions from individual projects at the programmatic level of the HEU, emissions cannot be quantified (as there is no project-level data) to establish whether the South Coast Air Quality Management District (SCAQMD) thresholds would be exceeded. Despite compliance with applicable General Plan goals and policies and incorporation of mitigation measures GPU PEIR MM 4.2-1 through MM 4.2-14, the HEU would result in a significant and unavoidable air quality impact due to the violation of an air quality standard and exposure of sensitive receptors to substantial pollutant concentrations. | Finding 3. The City of Huntington Beach finds that even with implementation of all feasible mitigation measures and compliance with applicable General Plan goals and policies, emissions associated with the HEU could result in an exceedance of established thresholds for daily emissions due to the speculative nature of future projects. No mitigation measures in addition to GPU PEIR MM 4.2-1 through MM 4.2-14 are feasible to reduce construction or operational air quality impacts to a less than significant level. | |
| The project would result in less than significant impacts related to the exposure of sensitive receptors to substantial pollutant concentrations following incorporation of mitigation measures MM AQ-1 and AQ-2. | As previously stated, air pollutant emissions associated with implementation of the HEU would result from construction activities and operation of uses allowed under the HEU. The amount of emissions generated by future development projects would vary depending on its size, the land area that would need to be disturbed during construction, the length of the construction schedule, and the number of developments being constructed concurrently. Future applicants for development projects facilitated by the HEU would be required to implement mitigation measures MM AQ-1 and AQ-2, which would require project-specific health risk assessments to minimize impacts associated with | Finding 1. The City of Huntington Beach finds that the identified changes or alterations in the Project, which would reduce this impact to a less than significant level, are hereby incorporated into the Project. No additional mitigation measures are necessary with implementation mitigation measures MM AQ-1 and AQ-2. | |

| Impact Statement | Impact Summary | Impact Finding |
|---|--|--|
| The project would result in a cumulative contribution to an air quality impact, resulting in a significant and unavoidable cumulative impact to air quality. | the exposure of sensitive receptors to toxic air contaminants and to ensure that construction emissions do not result in the exceedance of localized significance thresholds. With implementation of these measures, impacts would be reduced to a less than significant level. Cumulative development could violate an air quality standard or contribute to an existing or projected air quality violation because the South Coast Air Basin (SCAB) is currently in nonattainment for ozone, PM ₁₀ , and PM _{2.5} . Concerning daily emissions and the cumulative net increase of any criteria pollutant for which the region is in nonattainment, the Project would result in a cumulatively considerable increase to nonattainment of ozone, PM _{2.5} , and PM ₁₀ standards in the SCAB. Because no information on individual projects is currently available, cumulative construction and operational emissions cannot be accurately quantified. Despite compliance with General Plan goals and policies and implementation of mitigation measures GPU PEIR MM 4.2-1 through MM 4.2-14, daily construction and operational air quality emissions would be considered cumulatively significant and unavoidable. | Finding 3. The City of Huntington Beach finds that even with implementation of all feasible mitigation measures and compliance with applicable General Plan goals and policies, implementation of the HEU could result significant unavoidable impacts related to a cumulative increase in construction and operational emissions due to the speculative nature of future projects. No mitigation measures in addition to GPU PEIR MM 4.2-1 through MM 4.2-14 are feasible to reduce cumulative air quality impacts to a less than significant level. |
| Cultural Resources | | |
| Construction activities associated with implementation of the Project could cause a substantial adverse change in the significance of a historical and/or an, archaeological resource and may result in the disturbance of unknown human remains. With incorporation of mitigation measures GPU PEIR MM 4.4- 1, MM 4.4-2, and MM 4.4-3, these | It is currently infeasible to determine whether future development under the Project would result in demolition or removal of historical or archaeological resources, or the disturbance of unknown human remains, within the planning area. However, future projects would be required to implement mitigation measures GPU PEIR MM 4.4-1, MM 4.4-2, and MM 4.4- 3, which outline procedures to be followed during future construction activities to ensure compliance with local, State, and Federal regulations pertaining to | Finding 1. The City of Huntington Beach finds that the identified changes or alterations in the Project, which would reduce this impact to a less than significant level, are hereby incorporated into the Project. No additional mitigation measures are necessary with implementation mitigation measures GPU PEIR MM 4.4-1, MM 4.4-2, and MM 4.4-3. |

| Impact Statement | Impact Summary | Impact Finding |
|--|---|--|
| impacts would be reduced to a less than | such requires. Implementation of these measures | |
| significant level. | would ensure that Project impacts with respect to | |
| | archaeological and historical resources, as well as | |
| | unknown human remains, would be less than | |
| | significant. | |
| Geology and Soils | | |
| Future development under the HEU | All future housing development subject to rezoning and | Finding 1. The City of Huntington Beach finds that the |

| implementation of mitigation measures | existing regulations to minimize impacts to unknown | |
| GPU PEIR 4.5-1 through MM 4.5-3 and | paleontological resources. Implementation of these | |
| MM 4.4-4, as well as compliance with | measures and compliance with General Plan goals and | |
| applicable State and City regulations, | policies would reduce impacts associated with the | |
| these impacts would be reduced to a less | exposure of people to significant risk of geological | |
| than significant level. | failures, as well as impacts to unknown paleontological | |
| | resources, to a less than significant level. | |
| Greenhouse Gas Emissions | | |
| The project would result in project-level | The Project would potentially generate GHG emissions | Finding 3. The City of Huntington Beach finds that even |
| and cumulative significant and | that could have a significant impact on the environment | with implementation of all GHG reduction measures and |
| unavoidable impacts due to the | and could conflict with applicable plans for reducing | compliance with applicable General Plan goals and |
| generation of greenhouse gas (GHG) | GHG emissions. Although the Project would aim to | policies, GHG emissions associated with the HEU could |
| emissions and the potential conflict with | comply with GHG reduction strategies outlined in the | would be significant and unavoidable. No feasible |
| an applicable plan. | GPU PEIR, these strategies require additional action by | mitigation measures are available to reduce GHG |
| | City staff and officials, and the feasibility of | impacts to a less than significant level. |
| | implementing these strategies and specific | |
| | implementation details rely on numerous factors that | |
| | cannot be adequately forecasted at this time. | |

| Table 1: CEQA Findings for the H | EU |
|----------------------------------|----|
|----------------------------------|----|

| Impact Statement | Impact Summary | Impact Finding |
|---|---|--|
| | Furthermore, GHG emissions may differ from actual | |
| | Project future emissions due to various factors. As such, | |
| | the Project's potential to generate GHG emissions, | |
| | either directly or indirectly, and potential to conflict | |
| | with an applicable plan, policy or regulation adopted | |
| | for the purpose of reducing the GHG emissions would | |
| | be significant and unavoidable. Although both future | |
| | housing development facilitated by the Project and | |
| | cumulative projects are required to quantify project- | |
| | specific GHG emissions associated with construction | |
| | and operational activities and implement feasible | |
| | mitigation measures and/or GHG reduction strategies | |
| | to reduce GHG emissions, the contribution of daily | |
| | construction and operational GHG emissions has the | |
| | potential to create a significant impact. Thus, the | |
| | Project's GHG impacts would be cumulatively | |
| | significant and unavoidable. | |
| Hazards | | |
| Implementation of future projects under | Future housing development facilitated by the Project | Finding 1. The City of Huntington Beach finds that the |
| the HEU could create a potential | would not involve ongoing or routine use of substantial | identified changes or alterations in the Project, which |
| significant hazard to the public or the | quantities of hazardous materials during operations. All | would reduce this impact to a less than significant level, |
| environment through reasonably | future housing development subject to rezoning and | are hereby incorporated into the Project. No additional |

| hazardous materials into the | from hazardous materials. All future housing | |
| environment. However, with | development subject to rezoning and within overlay | |
| implementation of mitigation measure | zones would also be subject to compliance with GPU | |
| GPU PEIR MM 4.7-1, this impact would | PEIR MM 4.7-1, which requires compliance with with | |
| be reduced to a less than significant | Huntington Beach Fire Department specifications | |
| level. | related to the potential to encounter methane gas. | |
| | Compliance with City regulations, General Plan policies, | |
| | and implementation of mitigation measure GPU PEIR | |
| | MM 4.7-1 would ensure Project impacts would remain | |
| | less than significant. | |

| Impact Statement | Impact Summary | Impact Finding |
|--|---|---|
| Individual sites within the planning area are included on a list of hazardous materials sites that could result in the accidental spread of contamination and could create a significant hazard to the public or environment. However, with implementation of mitigation measures GPU PEIR MM 4.7-2 and 4.7-3, this impact would be reduced to a less than significant level. | Development of any identified sites of contamination would be required to undergo remediation and clean up before construction activities can begin. If contamination at any future project site were to exceed regulatory action levels, a future project would be required to undertake remediation procedures prior to grading and development under the supervision of appropriate regulatory oversight agencies. Compliance with City standards and implementation of mitigation measures GPU PEIR MM 4.7-2 and MM 4.7-3, which require preparation of a preliminary environmental site assessment to determine the potential for onsite contamination, would ensure that the Project would not create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment, resulting in | Finding 1. The City of Huntington Beach finds that the identified changes or alterations in the Project, which would reduce this impact to a less than significant level, are hereby incorporated into the Project. No additional mitigation measures are necessary with implementation of mitigation measures GPU PEIR MM 4.7-2 and MM 4.7-3. |
| Implementation of the HEU could impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan. However, with implementation of mitigation measure GPU PEIR MM 4.7-4, this impact is considered less than significant. | a less than significant level. Future development facilitated by the Project would increase housing density in certain areas of the City, resulting in greater population concentrations within certain areas. This increased density could interfere with emergency evacuation in the event of a City-wide emergency. However, the Project would not result in changes to the City's existing circulation network. No land uses are proposed that would impair the implementation of, or physically conflict with, the Huntington Beach Emergency Operations Plan/Hazard Mitigation Plan. As a result, the Project would not conflict with any State or local plan aimed at preserving and maintaining adopted emergency response or emergency evacuation plans. Notwithstanding, to minimize all potential impacts, all future housing development subject to rezoning and within overlay zones would be required to adhere to GPU PEIR MM | Finding 1. The City of Huntington Beach finds that the identified changes or alterations in the Project, which would reduce this impact to a less than significant level, are hereby incorporated into the Project. No additional mitigation measures are necessary with implementation of mitigation measure GPU PEIR MM 4.7-4. |

|---|--|--|
| The Project would result in a Project- specific significant and unavoidable impact due to the exposure of persons to excessive groundborne vibration during future construction activities despite implementation of mitigation measure GPU PEIR MM 4.10-5. | ambient noise levels associated with the Project. Despite compliance with General Plan goals and policies aimed at reducing noise and implementation of mitigation measures GPU PEIR 4.10-1 through 4.10-4, the Project would result in significant and unavoidable impacts concerning construction-related and operational noise levels. The Project's impact concerning the substantial temporary and permanent increase of ambient noise levels would be cumulatively considerable. Future development under HEU has the potential to generate construction vibration levels in exceedance of established thresholds at nearby sensitive receptors. Although future development would comply with General Plan policies to reduce groundborne vibration, mitigation measure GPU PEIR MM 4.10-5, which requires new development projects that include pile driving activities to incorporate vibration-reduction techniques to help to reduce impacts, construction vibration levels would not be reduced to a level that would be less than significant. Compliance with General Plan policies and implementation of mitigation measure GPU PEIR MM 4.10-5 would reduce potential groundborne vibration impacts associated with future construction activities, but not to a level that would be less than significant because certain construction activities may still be required in proximity to nearby sensitive receptors. Therefore, this impact would remain significant and unavoidable and would remain cumulatively significant and unavoidable and would remain cumulatively significant and unavoidable and would remain | Finding 3. The City of Huntington Beach finds that even with implementation of all feasible mitigation measures and compliance with applicable General Plan goals and policies, the Project could result in a significant and unavoidable impact due exposure of persons to the generation of groundborne vibration during construction. No mitigation measures in addition to mitigation measure GPU PEIR MM 4.10-5 are feasible to reduce impacts to a less than significant level. |
| Public Services | | |

| Utilities and Service Systems | | |
| Future development under HEU could require new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunication facilities. However, with implementation of mitigation measure GPU PEIR MM 4.15-1, this impact would be considered less than significant. | Future development under the HEU could introduce the need for additional infrastructure or connections to existing infrastructure. With incorporation of mitigation measure GPU PEIR MM 4.15-1, which requires future projects to demonstrate that there is adequate capacity in the wastewater collection system to accommodate discharges from future projects, and adherence to General Plan policies and existing City of Huntington Beach processes, impacts to water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunication facilities would be reduced to a less than significant level. | Finding 1. The City of Huntington beach finds that the identified changes or alterations in the Project, which would reduce this impact to a less than significant level, are hereby incorporated into the Project. No additional mitigation measures are necessary with implementation of mitigation measure GPU PEIR MM 4.15-1. |
| The Project would result in a significant and unavoidable project-specific impact on existing water supplies despite implementation of mitigation measure GPU PEIR MM 4.15-2. | Given the uncertainty of water supplies across the western United States and throughout the state of California, a future supply deficit would result in a significant and unavoidable impact associated with water demands from future development facilitated by the proposed Project. Until such time as greater confidence in and commitment from water suppliers can be made, even with implementation of mitigation measure MM 4.15-2, which requires project-specific applicants to incorporate water conservation measures as part of future projects, and adherence to General Plan policies and existing regulations, the HEU would result in a significant and unavoidable impact related to water supplies. | Finding 3. The City of Huntington Beach finds that even with implementation of all feasible mitigation measures and compliance with applicable General Plan goals and policies, the Project could result in a significant and unavoidable impact to water supplies. No mitigation measures in addition to GPU PEIR MM 4.15-2 are feasible to reduce water supply impacts to a less than significant level. |
| The Project would result in a cumulatively considerable contribution to water demand and a corresponding significant and unavoidable cumulative impact with respect to water supply. | As with the Project-specific impact, given the uncertainty of water supply across the western United States and throughout the state of California, a future supply deficit would result in a significant and unavoidable impact. Until such time as greater | Finding 3. The City of Huntington Beach finds that even with implementation of all feasible mitigation measures and compliance with applicable General Plan goals and policies, the Project could result in a significant and unavoidable impact to water supplies. 3.0 FINDINGS REGARDING PROJECT ALTERNATIVES

3.1. Introduction

The Draft SEIR prepared for the HEU considered two alternatives to the Project as proposed. Pursuant to Section 15126.6(a) of the CEQA Guidelines, the primary intent of an alternatives evaluation is to "describe a range of reasonable alternatives to the project, or to the location of the project, which would feasibly attain most of the basic objectives of the project but would avoid or substantially lessen any of the significant effects of the project, and evaluate the comparative merits of the alternatives."

This chapter describes the project objectives and criteria used to develop and evaluate project alternatives presented in the Draft SEIR. A description of the alternatives compared to the Project and the findings regarding the feasibility of adopting the described alternatives is presented for use by the City in the decision-making process.

3.2. Project Objectives

In accordance with State CEQA Guidelines §15124, the following primary objectives support the HEU's purpose, assist the City, as the lead agency, in developing a reasonable range of alternatives to be evaluated in this SEIR, and ultimately aid decision-makers in preparing findings and overriding considerations, if necessary. The HEU's purpose is to address the housing needs and objectives of the City and to meet the State Housing law requirements. The HEU has the following goals:

- Adopt State-mandated and locally desired programs to implement the City's Housing Element.
- Maintain and enhance the quality and affordability of existing housing in Huntington Beach.
- Provide adequate sites to accommodate projected housing unit needs at all income levels identified by the 2021-2029 RHNA.
- Provide for safe and decent housing for all economic segments of the community.
- Reduce governmental constraints to housing production, with an emphasis on improving processes for projects that provide on-site affordable units.
- Promote equal housing opportunities for all residents, including Huntington Beach's special needs populations.
- Promote a healthy and sustainable Huntington Beach through support of housing at all income levels that minimizes reliance on natural resources and automobile use.
- Maximize solutions for those experiencing or at risk of homelessness.
- Improve quality of life and promote placemaking.
- Affirmatively further fair housing.

3.3. Selection of Alternatives

The range of feasible alternatives was selected and discussed in a manner to foster meaningful public participation and informed decision-making. Among the factors that were taken into account when considering the feasibility of alternatives (as described in CEQA Guidelines Section 15126.6[f][1]) were environmental impacts, economic viability, availability of infrastructure, regulatory limitations, jurisdictional boundaries, and attainment of project objectives. As stated in Section 15126.6(a) of the CEQA Guidelines, the Draft SEIR need not consider an alternative whose effects could not be reasonably identified, whose implementation is remote or speculative, or one that would not achieve the basic project objectives. The analysis includes sufficient information about each alternative to provide meaningful evaluation, analysis and comparison with the proposed project.

3.4. Project Alternative Findings

The following is a description of the alternatives evaluated in comparison to Project, as well as a description of the specific economic, social, or other considerations that make them infeasible for avoiding or lessening the impacts.

As shown below and in Chapter 7.0 (Alternatives) of the Draft SEIR, two alternatives were evaluated in comparison to the Project, including the No Project Alternative required by CEQA. The two alternatives analyzed represent a reasonable range of alternatives to the Project. The analysis in this section focuses on significant and unavoidable impacts attributable to each alternative and the ability of each alternative to meet basic project objectives.

"No Project" Alternative (Alternative 1)

According to State CEQA Guidelines §15126.6(e), the specific alternative of "No Project" shall also be evaluated along with its impact. The purpose of describing and analyzing a No Project Alternative is to allow decision-makers to compare the impacts of approving the proposed Project with impacts of not approving the Project. The No Project Alternative analysis is required to discuss the existing conditions at the time the Notice of Preparation is published (August 4, 2021), as well as what would be reasonably expected to occur in the foreseeable future, if the Project were not approved, based on current plans and consistent with available infrastructure and community services.

Under Alternative 1, development within the City would proceed pursuant to the adopted City General Plan and zoning. The City's projected regional housing need for the 6th Cycle RHNA planning period (2021-2029) is 13,368 dwelling units (11,743 units when accounting for existing applications and pipeline projects). Under Alternative 1, the City would not implement the Housing Program required to comply with State law, to accommodate the lower-income RHNA units, including amendments to existing land use designations and zoning districts, an affordable housing overlay, and identification of underutilized, residentially-zoned parcels in an inventory of candidate housing sites. In total, the HEU identifies 378 candidate housing sites (approximately 419 acres). The proposed amendments to the Huntington Beach

General Plan and the City of Huntington Beach Zoning and Subdivision Ordinance of the City of Huntington Beach Municipal Code (Zoning Text and Zoning Map amendments) for changes to land use designations and base/overlay districts, as well as ancillary amendments to other planning documents, would not be implemented. These amendments, which are needed to accommodate future housing sites as part of the HEU's Implementation Program, would not be implemented at the 378 identified candidate housing sites. The capacity to develop 11,743 additional housing units that would be facilitated by Project implementation would not be provided under the No Project Alternative. Because the Project proposes only three candidate housing sites (Sites 3, 4, and 5) for rezoning, and all other sites would retain their existing underlying zoning, under Alternative 1, rezoning of Sites 3, 4, and 5 would not occur and existing zoning would remain in place.

Under this alternative, State Housing Law and legislative requirements for implementation of the Project's proposed programs and strategies to increase housing capacity and the production of affordable dwelling units in the City would not occur. Overall, Alternative 1 would not consider the candidate housing sites and adoption of the land use amendments and rezones necessary to achieve the City's RHNA. As a result, the capacity for 11,743 multi-family housing units would not be created. This alternative would not satisfy the Project objectives stated above because implementation of Alternative 1 would not facilitate the development of sufficient residential units to meet the City's RHNA allocation and would not satisfy legislative mandates for the HEU.

Findings

The No Project Alternative would result in fewer impacts than the Project. Although this Alternative could reduce environmental impacts from future housing development facilitated by the HEU, the No Project Alternative would not achieve any of the project objectives. The No Project Alternative would not provide adequate housing sites to meet the City's 6th Cycle RHNA allocation or satisfy State housing law including AB 1397. Under the No Project Alternative, the City would not meet its RHNA obligations. Thus, this Alternative would directly conflict with California Government Code §65583, which stipulates that a jurisdiction must assess its housing element every eight years and identify adequate sites for housing and provide for the existing and projected needs of all economic segments of the community.

Beach and Edinger Corridors Alternative (Alternative 2)

As with the proposed Project, the Beach and Edinger Corridors Alternative (Alternative 2) would meet the City's RHNA. However, residential development under Alternative 2 would be concentrated around the Beach and Edinger Corridors area of the Beach and Edinger Corridors Specific Plan (Specific Plan 14). More specifically, new residential development would occur in portions of Specific Plan 14's Transition Corridor Areas (TCAs), which would support transit-oriented communities, and on fewer total parcels. This would have the effect of further reducing vehicle miles traveled (VMT), transportation-related energy demands, and associated criteria air pollutant and greenhouse gas emissions associated with housing development. However, this approach would require taller building heights and higher densities to achieve the target housing production in this area necessary to meet the RHNA, which could result in increased aesthetic

impacts as compared to the Project. This alternative would also create dense/confined residential development and not expand housing opportunities across the City and would not affirmatively further fair housing to the same degree as the Project.

Findings

Alternative 2 would meet the majority of the project objectives as it is assumed that development under this alternative would meet the 6th Cycle RHNA housing needs. However, Alternative 2 would fail to affirmatively further fair housing since this alternative would not provide new housing within highest resources areas with access to highly rated schools, parks and community amenities. New housing would be concentrated within one area of the City. Furthermore, Alternative 2 could result in additional constraints to housing because the densities necessary to accommodate all of the RHNA within the Specific Plan may not be supported by the market (e.g., land and construction costs), which could potentially make it cost-prohibitive for developers to construct housing. As such, because Alternative 2 would fail to affirmatively further fair housing and could result in additional constraints to the construction of housing, this alternative would likely not be certified by the California Department of Housing and Community Development (HCD), as it would not substantially conform to Housing Element Law.

Alternatives Considered but Eliminated from Future Consideration

Five additional alternatives were initially considered during the scoping and planning process, but were not selected for detailed analysis in the Draft SEIR. These included: Reduced Dwelling Units Alternative, Alternate Housing Sites Alternative, Palm/Goldenwest Specific Plan (SP 12) Alternative, Huntington Harbour Area Sites Alternative, and McDonnell Centre Business Park Specific Plan (SP 11) Alternative.

Reduced Dwelling Units Alternative

A Reduced Dwelling Units Alternative was considered, but rejected from further consideration. This alternative was considered to assess if it would help mitigate the significant and unavoidable impact to potable water resources associated with the proposed Project, as future housing development facilitated by the Project would incrementally increase the demand for potable water. The projected water demand associated with Project implementation at buildout would increase water demand in the City by approximately 2,905 acre-feet per year (AFY), or approximately 11 percent over existing 2022 and projected 2030 City demands. While the Urban Water Management Plan (UWMP) did not specifically account for the population growth associated with the Project, it did project that the City would serve a population of 206,499 persons by 2030¹, which is an additional 9,625 persons over the City's existing population of 196,874 persons.² Therefore, it can be inferred that at least a portion (approximately 54 percent³, or 949 AFY) of the water demand associated with the Project population growth was accounted

¹ UWMP Table 3-2: Retail: Population - Current and Projected.

² State of California Department of Finance. 2021. *E-5 Population and Housing Estimates for Cities, Counties, and the State, 2011-2021 with 2010 Census Benchmark*. <u>https://www.dof.ca.gov/Forecasting/Demographics/Estimates/e-5/</u> (accessed June 2021).

³ Based on 25,020 persons/9,625 persons.

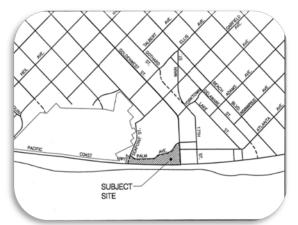

for in the UWMP's anticipated 2030 future water demand. Thus, after considering the existing water demand associated with the displaced land uses that would be removed, the approximately 54 percent assumed to be already accounted for in the UWMP's anticipated population growth, and unaccounted for net Project water demand of approximately 46 percent or 823 AFY which would remain unmet. In order to not exceed the projected water resources for the City, the Reduced Dwelling Units Alternative would have to reduce the number of housing units to a number that would fail to meet the basic RHNA requirements.

Alternate Housing Sites Alternative

The Alternate Housing Sites Alternative was considered, but rejected from further consideration. This alternative was determined to be infeasible during the scoping process because alternative housing sites not included in the scope of the Project were found to be infeasible due to regulations, site constraints, property owner interest in developing housing, community input, and existing uses. Additionally, some candidate housing sites were considered, but rejected because potentially significant effects of future housing development would be avoided or substantially lessened by rejecting those sites. Examples of alternative sites initially considered are discussed below.

Palm/Goldenwest Specific Plan (SP 12) Alternative

This is a 96-acre area bordered by Pacific Coast Highway, Goldenwest Street, and Seapoint Street and is located entirely within the Coastal Zone. The property is designated for visitor serving commercial uses within the Palm/Goldenwest Specific Plan. At the time the specific plan was adopted in 2000, the property was an active oil field. Aera Energy owned the property and indicated that the property would remain in oil production for the next 15 to 20 years. As such, the specific plan was adopted to plan for reuse of the site after oil production activities ceased.

Palm/Goldenwest Specific Plan 12

This site was originally identified as a candidate housing site in the 6th Cycle Housing Element because of its large size and its potential availability for residential development within the planning period (based on the information in SP 12). Housing capacity on the site, when applying the proposed Affordable

Housing Overlay, would accommodate 40 to 50 percent of the City's total RHNA (96 acres x 55 du/acre up to 96 acres x 70 du/acre). Although this site could accommodate residential uses, the site is located within higher resource areas that could result in greater environmental impacts than other sites included in the scope of the Project. The following are reasons why this alternative was rejected:

- The location of the site within the Coastal Zone would require the California Coastal Commission to approve the Affordable Housing Overlay designation; timing of the "rezoning" effort could be lengthy with no guarantee of approval from the Coastal Commission.
- The potential for costly remediation of the site due to its historic use as oil field.
- The property owner no longer anticipates oil production activities to cease as described in SP 12. Therefore, the property is not expected to be available for development prior to 2030.
- The concentration of almost 50 percent of RHNA allocation on one site may lead to overconcentration of affordable housing in one area.

Huntington Harbour Area Sites Alternative

There are two commercial areas in the Huntington Harbour area with a combined acreage of 21.5 acres. One area is the Huntington Harbour mall, which is an older mall developed in the 1960s. This 10.8-acre site was identified as a potential candidate housing site because it is underutilized with one and two-story buildings developed at a relatively low floor-area-ratio (FAR) considering that the maximum allowed FAR is 1.5. The site has potential to be redeveloped as a mixed-use project with the inclusion of residential units at 30 du/acre. The site has close access to Warner Avenue, a major arterial. The second area is Peter's Landing. This site includes the Peter's Landing commercial center and adjacent properties along Pacific Coast Highway, and has been studied for mixed use (residential/commercial) in prior General Plan planning efforts. In addition, the property owners previously showed interest in adding residential uses in existing or new development projects on the sites. Previous site analyses on this site indicate that residential could be accommodated at higher densities.

Peter's Landing Area

Huntington Harbour Mall

The following are reasons why this alternative was rejected:

- The location of these sites within the Coastal Zone would require the California Coastal Commission to approve any changes to the zoning/land use designation including an Affordable Housing Overlay designation. As such, the timing of the "rezoning" effort could be length with no guarantee that the Coastal Commission would approve the amendments, particularly because residential is a lower priority use in the Coastal Zone.
- These sites, in conjunction with the general Huntington Harbour area, are shown in the City's Sea Level Rise Vulnerability Assessment as one of the most vulnerable areas in the City with development in this area having the highest exposure to sea level rise hazards (e.g., storm and non-storm flood projections becoming widespread with 1.6-foot and 3.3-foot sea level rise, respectively).

McDonnell Centre Business Park Specific Plan (SP 11) Alternative

The McDonnell Centre Business Park Specific Plan encompasses 307 acres in the northwestern portion of the City. It has access from Bolsa Chica Street and Bolsa Avenue, both major arterials, with close access to the 405 freeway. The area was first developed for the aerospace industry in the 1960s and a specific plan was adopted in 1997 with amendments in 2002 and 2006 that allowed for approximately eight million square feet of industrial, office, and ancillary uses (including the existing development). Boeing has been the primary landowner in the area, although other major business tenants have moved into the specific plan area. In 2018, Boeing began marketing some of its properties in the specific plan area. As such, the City evaluated housing potential within portions of the specific plan area for the 6th Cycle, particularly workforce housing and lower income worker housing. The specific plan could accommodate a large capacity of housing units at higher densities due to its size and existing and planned infrastructure.

McDonnell Centre Business Park Specific Plan (SP 11)

The following are reasons why this alternative was rejected:

- There is a strong market for industrial land in this area of the City. The site was even more attractive to potential developers due to its proximity to the freeway and because zoning and environmental approvals were already in place.
- Potential conflicts between industrial uses and residential uses.
- Potential costs to remediate site to residential standards.
- Properties have already started redeveloping with new industrial buildings recently completed and future phases approved.

4.0 STATEMENT OF OVERRIDING CONSIDERATIONS 4.1. Introduction

Section 15093 of the CEQA guidelines states:

- (a) CEQA requires the decision-making agency to balance, as applicable, the economic, legal, social, technological, or other benefits of a proposed project against its unavoidable environmental risks when determining whether to approve the project. If the specific economic, legal, social, technological, or other benefits of a proposed project outweigh the unavoidable adverse environmental effects, the adverse environmental effects may be considered "acceptable."
- (b) When the lead agency approves a project which will result in the occurrence of significant effects which are identified in the Final EIR but are not avoided or substantially lessened, the agency shall state in writing the specific reason to support its actions based on the Final EIR and/or other information in the record. The statement of overriding considerations shall be supported by substantial evidence in the record.
- (c) If an agency makes a statement of overriding considerations, the statement should be included in the record of the project approval and should be mentioned in the notice of determination.

The City of Huntington Beach proposes to adopt a Statement of Overriding Considerations regarding the significant cumulative air quality, greenhouse gas, hydrology and water quality, noise, and utilities/water supply impacts of the Project. This section describes the anticipated benefits and other considerations of the Project to support the decision to proceed, even though significant and unavoidable impacts are anticipated.

4.2. Significant Adverse Project and Cumulative Impacts

The City of Huntington Beach is proposing to approve the proposed Project, with revisions to reduce environmental impacts, and has prepared a SEIR as required by CEQA. Even with revisions to the Project, the following impacts have been identified as being unavoidable as there are no feasible mitigation measures available to further reduce the impacts. Refer to Chapter 2 (CEQA Findings) for further clarification regarding the impact listed below.

Air Quality

Despite compliance with General Plan policies, GPU PEIR mitigation, and MM AQ-1 and AQ-2, the Project would result in significant and unavoidable impacts concerning construction-related and operational emissions. In addition, sites over two acres could expose sensitive receptors to significant impacts by exceeding construction LST thresholds. The Project-related contribution of daily construction and operational emissions associated with the HEU are considered cumulatively significant and unavoidable.

Greenhouse Gas Emissions

Despite the recommendation of Greenhouse Gas Reduction program GHG reduction strategies, the Project would generate GHG emissions that may have a significant impact on the environment and could

conflict with applicable plans for reducing GHG emissions. Therefore, impacts on GHG are considered significant and unavoidable, both for the Project and cumulative conditions.

Hydrology and Water Quality

The Project could substantially decrease groundwater supplies resulting in a significant and unavoidable impact concerning sustainable management of the Basin. The Project's impact concerning groundwater supplies would be cumulatively considerable and a significant unavoidable impact would occur.

Noise

Despite compliance with GPU PEIR mitigation, the Project would result in significant and unavoidable impacts concerning construction-related noise and vibration levels and operational noise levels associated with traffic. The Project's impact concerning the substantial temporary and permanent increase of ambient noise levels would be cumulatively considerable. The Project's impact concerning construction-related noise and groundborne vibration would also be cumulatively considerable.

Utilities and Service Systems

Despite compliance with GPU PEIR mitigation, until the water supply situation improves, the water demands from future development pursuant to the HEU would result in a significant and unavoidable impact concerning water supplies. Additionally, until such time as greater confidence in and commitment from water suppliers can be made, or the water supply situation improves, the Project's impacts concerning water supplies to serve future development would be cumulatively considerable.

4.3. Findings

The City of Huntington Beach has evaluated all feasible mitigation measures and potential changes to the Project with respect to reducing the impacts that have been identified as significant and unavoidable (see Chapter 2, CEQA Findings). The City of Huntington Beach has also examined a reasonable range of alternatives to the project as proposed (see Chapter 3, Findings Regarding Project Alternatives). Based on this examination, the City of Huntington Beach has determined that the No Project Alternative is considered to be the environmentally superior alternative.

4.4. Overriding Considerations

Specific economic, social, or other considerations outweigh the significant and unavoidable impacts stated above. The reasons for proceeding with the proposed project, notwithstanding the identified significant and unavoidable impacts are described below.

Proposed Project Benefits

1) The HEU would facilitate the development of a wide range of housing types in sufficient supply to meet the needs of current and future residents, particularly for persons with specific needs, including but not limited to extremely low, very low, and lower income households; seniors; persons

with disabilities; large households, single-parent households, people experiencing homelessness or at risk of homelessness, and farmworkers.

- 2) The HEU would increase the supply of affordable housing in high opportunity/resource areas, including areas with access to employment opportunities, community facilities and services, and amenities.
- 3) The HEU would provide a comprehensive system of support and would expand housing options aimed to prevent and end homelessness.
- 4) The HEU would reduce constraints to the development of housing, including affordable housing, through programs that allow ministerial approval processes, permit ready plans for Accessory Dwelling Units, a review and update of the City's small lot ordinance, and housing overlays in non-residential areas.
- 5) The HEU would address planning and monitoring goals for long-term affordability of adequate housing.
- 6) The HEU would facilitate the development of an accessible housing supply for all persons without discrimination in accordance with State and federal fair housing laws. The HEU would enhance existing lower resource neighborhoods by promoting livable, healthy, and safe housing for all residents.
- 7) The HEU provides a plan for meeting the City's RHNA goals and to affirmatively further fair housing, which substantially complies with State law, thereby enabling the City to achieve certification of the HEU through the California Department of Housing and Community Development. Certification of the HEU would also enable the City to maintain eligibility for funding programs tied to a compliant HEU.
- 8) The HEU would allow the City of to revitalize commercial corridors and older industrial areas by allowing for additional housing opportunities in the City while maintaining the character of existing, long-established single-family residential neighborhoods in the City. Consistent with General Plan Implementation Program LU-P.14, the Affordable Housing Overlay allows for housing within the Research and Technology zoned areas, which establishes housing opportunities for employees of business in these areas. The provisions of the Affordable Housing Overlay ensure that potential conflicts between residential and non-residential uses in these areas would be minimized. The City would continue to ensure that all standards for building design, streetscape design, and landscaping would be adhered to and would review development proposals to ensure consistency with the character and visual appearance of the surrounding neighborhood.
- 9) The HEU would encourage future housing developments to better integrate with alternative modes of traditional transport because over half of the candidate housing sites identified in the HEU are located along High Quality Transit Areas. New development would also be encouraged to promote and support public transit and alternative modes of transportation by incorporating bus turnouts and shaded bus stops (where appropriate) and providing enhanced pedestrian and bicycle facilities.
- 10) With more organized development and guided use of existing resources, such potential impacts to water supply can be monitored and improved for the health and benefit of residents. Further, park

lands and open spaces can be protected and retained in place throughout the planning horizon to provide recreational benefits to residents, visitors and school aged students. A shift toward sustainable resources and self-sufficiency, as outlined in the HEU, will allow for the continuation of the valued way of life within the City of Huntington Beach throughout the planning horizon. For example, future projects would be required to comply with General Plan Goal ERC-15 and Policies ERC-15.A and ERC-15.B, which aim to maintain an adequate supply of water and distribution facilities capable of meeting existing and future water supply needs and require monitoring to reduce impacts to the water system in an effort to maintain and expand water supply and distribution facilities.
