PUBLIC WORKS COMMISSION REQUEST FOR ACTION

SUBMITTED TO: Chairman and Members of the Commission

SUBMITTED BY: Travis K. Hopkins, PE, Director of Public Works

Subject:

McCallen Park Stormwater Improvements, CC-1588

Statement of Issue:

Plans and Specifications for the McCallen Park Stormwater Improvements Project, CC-1588, are in final preparation. A grant for this project was awarded after approval of the FY 2018/19 Capital Improvement Budget. Therefore City Council will be asked to appropriate funding at the time of award of a construction contract.

Funding Source:

A \$500,000 grant is available from OCTA. The local match requirement of \$125,000 is available from the Drainage Fund.

Recommended Action:

Motion to include the McCallen Park Stormwater Improvements Project, CC-1588, in the FY 18/19 Capital Improvement Program.

Alternative Action(s):

Deny approval and recommend an alternative action.

Analysis:

The project proposes the installation of a trash removal device at McCallen Park, located under the existing parking lot. The proposed continuous deflection separator (CDS) unit will intercept trash from a 93" storm drain mainline that runs along Delaware Street. This storm drain conveys storm flows and

urban runoff from a 382 acre watershed. Delaware Street is a heavily traveled street with impacted parking and underground utilities, so constructing the CDS unit in the City's adjacent parking lot facilitates safe access for maintenance and inspection.
